## Custom Fishing Charts

*"I've often wondered why we could send a rover to the moon, but couldn't get something like this on a bottom machine. You are on the right track my friend..."*

**--Robert Stuart**

*Gulf Coast fisherman*

Thank you for your purchase of a StrikeLines 3D chart for Android. The chart is a product of hundreds and hundreds of hours tracking down and processing the best raw multi-beam sonar data from tens of different sources. Using advanced processing software normally reserved for petroleum companies and government funded bathymetry surveys, we slowly synthesized it into a truly unique chart. We're proud of our 3D charts and hope you enjoy using this one as much as we enjoyed creating it.

\*The video instructions for installing a StrikeLines 3D Chart on Android devices can be found [here](#).

1. Download and install OsmAnd Maps Travel Navigate from the Google Play Store.

2. Open OsmAnd and select a base map. We recommend the worldwide overview map or the map for your state.

(Step 2 continued)

3. After the base map is finished downloading, check the base map and pinch to zoom.

- Exit OsmAnd and power off your device. After the device is off, turn it back on.
- Make sure you're on Wi-Fi and have plenty of free space for the chart. The 3D charts can be big (1-10GB).
- Go to StrikeLines.com and login to your account.
- Go to Downloads.

StrikeLines 3D Chart Instructions for Android devices.

- Click the yellow button to download the appropriate chart file.

9. You may see a small download arrow flashing at the top of your screen. When that becomes solid or turns into a check mark your download is finished.

10. Swipe down from the top to view your notifications. Click the notification for the completed download. OsmAnd will automatically open and load the chart.

11. OsmAnd will load the chart.

12. Select the chart you downloaded. In the screenshot below it would be the Florida Keys chart.

13. Click the globe icon in the top left of the chart screen.

14. Select the Overlay option.

15. Choose the StrikeLines chart you downloaded. Note that **if your chart is broken into multiple chart files** due to resolution and file size, you will need to repeat steps 8 through 14 for each chart section. You can display a maximum of three chart sections at a time, one in Overlay, one in Map Source, and one in Underlay.

16. Slide the transparency slider all the way to the right.

17. Tap anywhere in map box and return to the main map.

18. Click the globe icon on the top left of the screen.

19. Enable the underlay map

20. Select OsmAnd (online tile)

21. Click the three horizontal bars icon on the bottom left of the screen.  
Select Settings at the bottom of the menu.

22. Select Configure profile.

23. Select General settings.

24. Then select Coordinate Format.

25. Change the format to whichever you prefer (most common is degrees and decimal minutes).

26. Select Apply to all profiles

27. Return to the map screen.
28. Click the small circle or target icon on the bottom right of the screen next to the zoom buttons. This enables the GPS. Select Allow when asked if OsmAnd can access location settings.

StrikeLines 3D Chart Instructions for Android devices.

**To create a waypoint or pull coordinates for a spot**, long press on the map where you want the waypoint or coordinates. If you want to save it, click add to favorites. If you want the coordinates for the spot, click Description in blue in the bottom left.

To edit a waypoint, press the waypoint then click Description in the bottom left. From the Description screen you can pull the coordinates, change the icon for the waypoint, add or change the waypoint's group, and even enter a description. Note that the waypoint must be marked as a favorite to get these options.

**Activate Trip Recording (Optional):**

To enable the ability to record your trips, follow the screenshots.
